

SCC'24 Practicalities

SCC'24 Schedule

- Deadline for second part in application due on 5th of August
- Needed for this:
 - Picture of the team
 - Short description of the team
 - Team logo
 - Remember to fill in your individual information!
- Poster due (most likely) a few weeks before the competition
 - Assigning people responsible for planning and designing this
- You should fill up an ESTA application ASAP when we learn about the hotel accommodation

Other practicalities

- Social media?
 - CSC will write a blog post on our site about the team later
- Expenses
 - Hotel accommodation and conference tickets provided by the conference
 - The vendor sponsor and CSC will provide costs for the plane tickets
 - Some "daily allowance" for food will be provided, but the exact details are being planned out

The competition cluster

Our cluster provider and contacts

- The cluster will be provided by HPE
 - Nathalie Viollet (Manager at HPE)
 - Jeremy Foulon (HPC & AI program manager at HPE)
- Working with the bid for SCC since 2022
- Provider for LUMI
- Offices at Grenoble, France

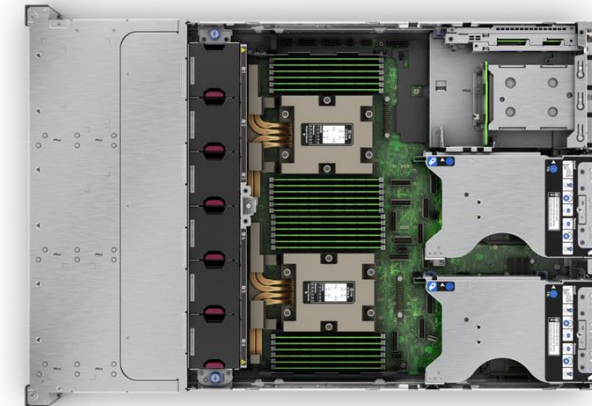

Hewlett Packard
Enterprise

Cluster timetable

- BOM delivered
 - Let's look at it together
- Regular meetings over Zoom will start in August
- HPE will order the system ASAP
- Virtual access to the cluster before the competition
- HPE will provide us some training
- HPE will ship the cluster on-site to Atlanta

The hardware (currently)

- HPE ProLiant DL385 Gen11 server
 - Three nodes in total
 - Connected via 200Gb/s Infiniband interconnect
- AMD EPYC 9354-processors (2 per node)
 - 32 cores @ 3.25 GHz
 - TDP: 280W
- AMD MI210 GPUs (2 per node)
 - 22,6 TFLOP/s peak performance
 - TDP: 300W
- 768GB of RAM per server
- 6,4 TB NVMe Gen4 disk space per server

AMD EPYC™ 9004 Series Processors

- Up to 192 cores per server for blazing performance
- Large memory and L3 cache support

Our training plan with the hardware

- You will get free access to the system when it's assembled
- The people interested in the sysadmin tasks in the competition should start working with the system first
- We will set up the system to be as ready as possible before the competition
 - Slurm , software stack, users for everybody,...
- Building readymade recipes of HPL, HPCG, etc. for the hardware before the competition
